
manufactural modern industrial materials and its role in contemporary local interior architecture *

Dr. George mahfoud **

Abstract

The field of the construction and rehabilitation is witnessing a widespread use all over the world it uses cladding materials or semi-operational with the appearance of a fake (non-native) or emulating the original resources and the craft products to reproduce the decorations of historical models.

The fake industrial materials are considered a revolution in the world of construction and rehabilitation. These materials are featured by varied characteristics. Generally, they are an easy alternative manufactured, beautiful, cheap and quick installation and with endurance and durability .they can also be recycled and used for the manufacture of these substances. Most traditional raw materials such as cement, paint, gypsum, wood and industrial vehicles modern and innovative, paper, fabrics, leather and petroleum products are used to make the products in question, thermoplastic compounds waste and the remnants of the industry .

For the paper in Arabic see pages (113-146)
